Question and Answers

Question	Answer
Are there any Java versions that are not compatible with the upgraded Deski or Webi applications?	Currently, there are no known Java version compatibility issues with Deski or Webi. However, in the future, if compatibility issues are identified this information will be communicated.
Can you hide Explorer toolbars to provide more workspace in Webi?	Yes. Use the Explorer *Tools* menu options to hide unneeded Explorer toolbars; this will expand the Webi workspace.
Is there a way to see all your pages at once without using page navigation?	No. In Webi you must use the *Page Navigation* buttons to view one page at a time.
How do you view the page layout in a report?	From the Webi toolbar use the *Switch Page/Quick Display* layout icon to activate the page layout view.
Can you use a formula in a report filter?	Yes. You would create a filter variable containing the filter condition. Example: Fund Type filter=([Fund Type] ="1300").
The example in the training manual for a flag variable and measure shows "Then" and "Else". Isn't a semi colon used in Webi?	You can use "Then" and "Else" in your formulas in Webi. They are not listed as Operands but you can type the words "Then" and "Else" in your formula and they will work.
Does the upgraded application sill include *Time Out* settings?	Time Out settings will still apply to the upgraded applications. However, when you open eMARS and access infoAdvantage you could close eMARS to get around the eMARS application Time Out and just leave the infoAdvantage window open. However, the database time out setting of 20 minutes in unavoidable.
If a Thick Client report was saved to "Personal Reports to Import" category using infoAdvantage instead of opening the report in Business Objects 6.5 and republishing, will it still be available in BO XI?	Yes. Saving a Thick Client report from within infoAdvantage is acceptable. The report will be found in the "Personal Reports Imported" after go live on March 1.
